WELCOME TO OUR WORLD OF HANDMADE CONCRETE TILES

Cement tiles, Encaustic tiles, Carreaux de Ciment, Mosaic Hidralico, Zementfliesen, Moroccan tiles. Our tiles have many names. We call them "Concrete Tiles"; that is exactly what they are.

Made of cement, color pigments and marble powder, our concrete tiles are handmade with a heritage of more than 150 years. No two tiles are the same, and the slight color variation of each tile is what makes them so special.

Contrary to traditional clay or ceramic tiles, concrete tiles are not kiln fired. They strengthen through "curing"; a process of drying the tiles for 21 days in humid conditions.

Our tiles are made in a quality without compromise. The full process, involving the selection of materials, the hydraulic pressure, the temperature, humidity and exposure to light, has a vast effect on both the aesthetic and functional performance of the tiles.

A collection of 100+ colors, more than 20 formats and a large range of geometric patterns to choose from gives you nearly unlimited possibilities to customize the design for your next project.

Welcome to our world of concrete tiles!

CONCRETE TILES ARE ECO-FRIENDLY

Only small amounts of energy is used in the process of making concrete tiles and very little waste is produced. The factory have implemented several sustainable efforts in the production.

This includes water filtration and rainwater reclamation systems, recycled packaging, and a solar-heated water supply. In addition, workers are all paid fair wages, and all surplus tiles are donated to their families as well as the local community.

Every single tile is handmade by skilled local artisans, and the process takes from one to three minutes per tile, depending on its pattern and complexity. Each tile is pressed in a hydraulic press - not oven fired like a ceramic tile - and therefore very little energy goes into the production. More than 90% of the materials that make up the tiles are sourced locally.

After pressing, the tiles are soaked in water, then air-dried and cured for 3 weeks, in a humid and warm enclosure. There are no short cuts; concrete tiles needs time to gain their strength.

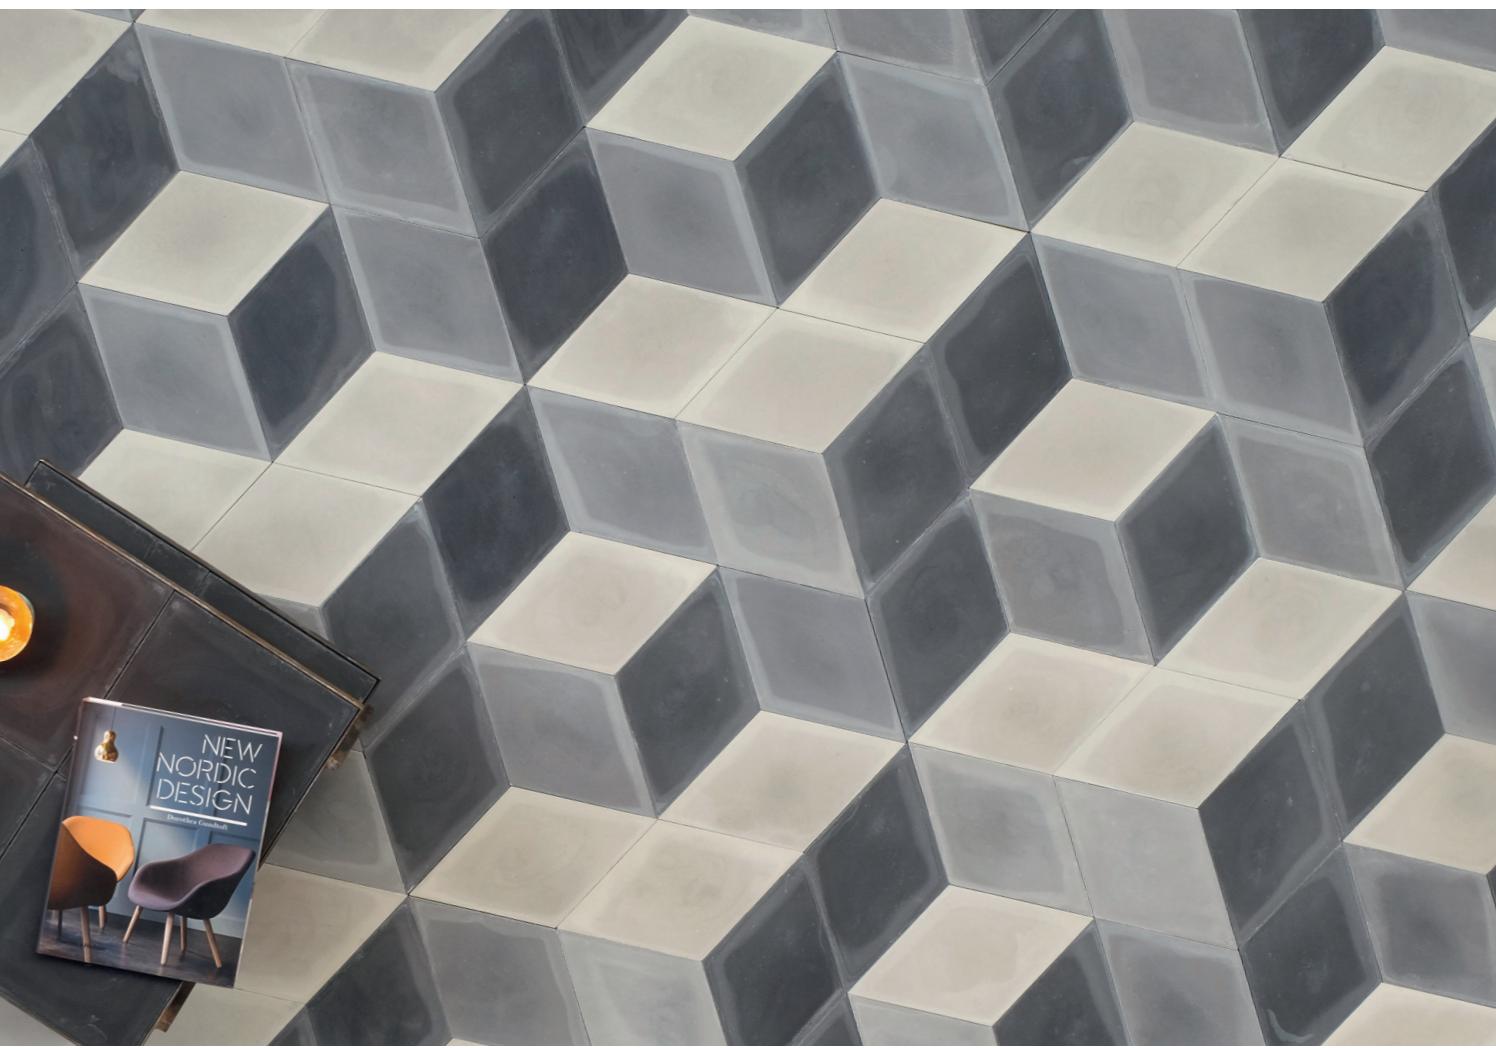

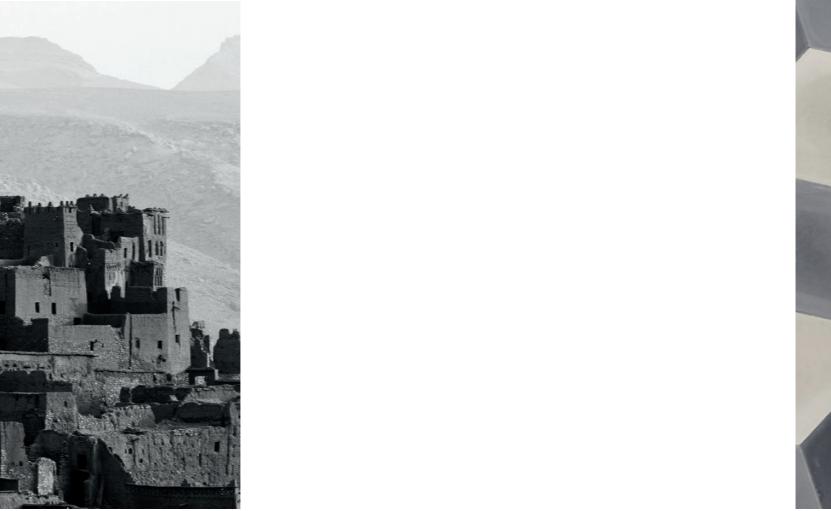

A UNIQUE BLEND OF CRAFTSMANSHIP AND INDUSTRIALIZATION

The origin of concrete tiles goes back to southern France and Northern Spain more than 150 years ago. After the invention of the revolutionary "Portland Cement" in 1824, factories producing tiles with this new cementitious material began to pop up close to the cement factories in south of France and in northern Spain.

After the Second World War, concrete tiles more or less disappeared in the West, as modern industry began to mass-produce glazed clay tiles. The production machinery of concrete tiles in France and Spain were sold off to former colonies.

In Morocco, as in Asia and South America, the widespread use of concrete tiles rapidly increased after the World Wars. Today the tiles are produced all over the world, mainly in former French and Spanish colonies. They have taken on fascinating and vibrant local expressions, made by hand in small local workshops and factories.

Nearly forgotten by Western architects and designers for almost a century, concrete tiles are now experiencing a unique renaissance, giving design lovers all over the world the chance to live and work with this amazing tile again.

PERFECTLY IMPERFECT

Established in Copenhagen in 2013, MAROKK adapts the heritage of "Danish design" into the world of concrete tiles. A tradition rooted in the 1950's "Mid-century Modern" and its focus on simplicity, materials, form and function.

As production methods in the traditional tile industry have developed to a high technical level, today every texture, pattern or color can be imitated onto ceramic tiles.

The limewash appearance of concrete tiles, combined with their natural color fading process, makes these tiles truly unique and not possible to replicate in any way; a living surface that will age with its residents and surroundings.

CUSTOMIZE YOUR OWN DESIGN

The essence of concrete tiles are traditionally a patterned surface. Over time it fades in color and reaches its distinct and beautiful worn appearance.

While traditional concrete tiles often have very colorful motifs, the tiles can be just as beautiful without a pattern motif. Solid colored concrete tiles lets the "living" concrete material come to its own right.

With Diamonds, Hexagons, Rectangles and Squares in various sizes to choose from, our solid concrete tiles are today a contemporary and customizable option for many projects.

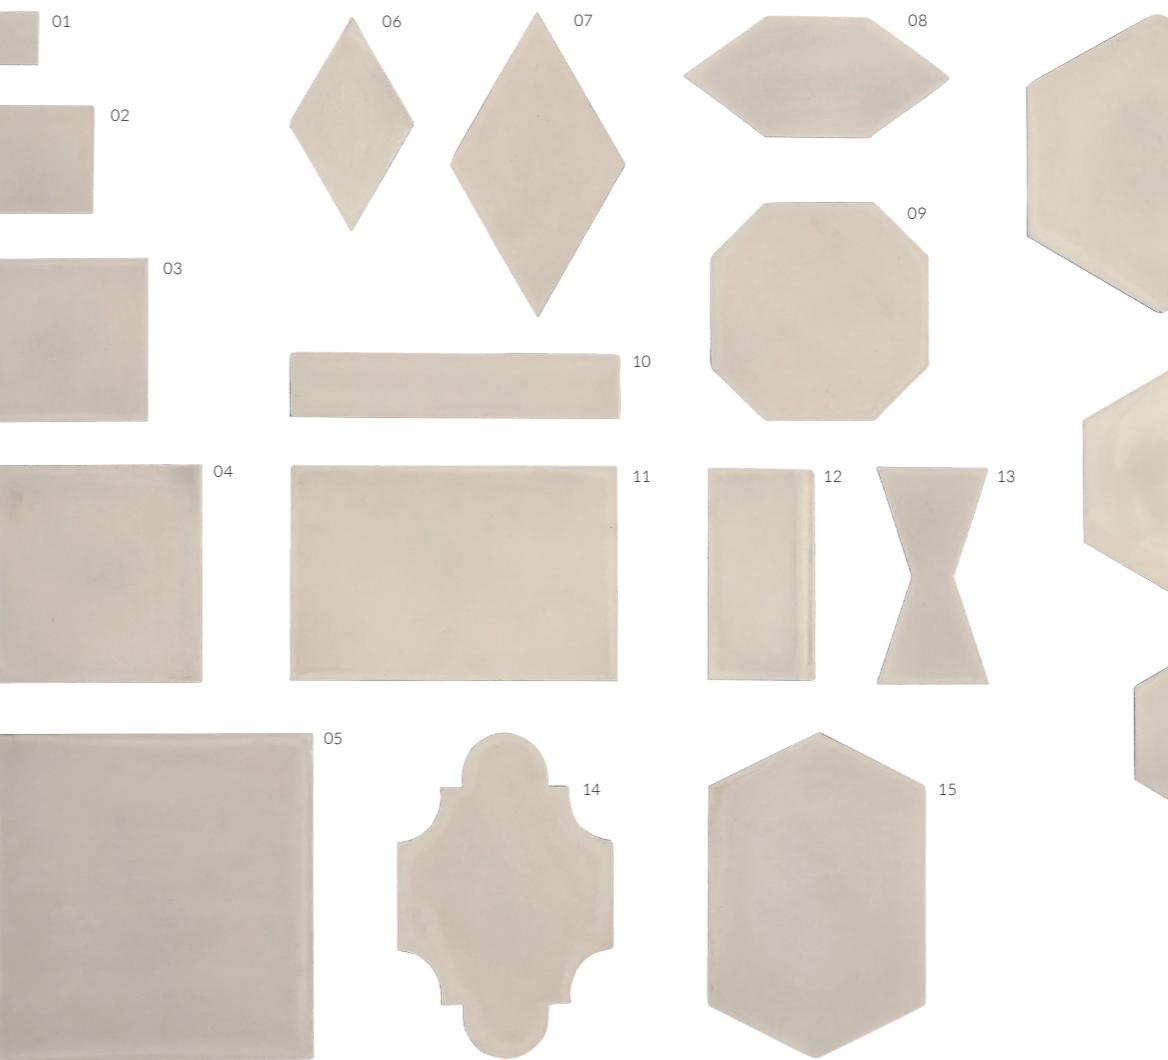

20 geometric formats and more than 100 ways to color them are at your disposal in our comprehensive range of colors and formats.

Custom patterns can be made up from drawings to create designs for commercial clients, brands, architects and designers.

The tiles are ideal for commercial areas, or floors with high pedestrian traffic, where the friction of shoes, etc., will polish the tiles and create the desirable faded patina. Suitable for all indoor flooring and walls, including kitchen and baths.

WE STOCK +2.000 M² OF TILES, SO YOU DON'T HAVE TO WAIT 3 MONTHS

Concrete tiles are "slow cooking". With a lead-time of 4 weeks, and freight taking just as long, concrete tiles needs time. That is why we carry a stock of more than 2.000 m² in our warehouse in Copenhagen for immediate delivery.

Orders from stock will be delivered within 2-4 days in most of Europe. Lead-time for factory orders from Morocco is approx. 12 weeks. Express factory orders can be delivered in 6 weeks at an additional cost.

Send an order or inquiry to info@marokk.dk. When placing an order, you will receive an invoice within 24 hours. After payment has been received, the tiles will be packed and shipped within 2 working days.

You can also place an order at one of our dealers. Find them on marokk.com.
